## IMPROVING TABLEAU CLOUD MIGRATIONS

A clean, successful migration from Tableau Server to Tableau Cloud is achievable but not always achieved. We've found that 99% of problems can be avoided with better planning.

- ✓ Zuar employs a **9 Step Migration Assessment** to ensure you're 'Cloud Ready'. If you're not, we can quickly get you there.
- ✓ A requirement of **Cloud Ready** is for your existing data sources to be ready to flow into a cloud database. Or for more problematic data sources, that solutions have already been devised.
- ✓ **On-premises data sources** can typically be mirrored in the cloud if you want to maintain their original set-up.
- ✓ A minority of organizations are fully ready to migrate to Tableau Cloud, so Zuar can be instrumental in planning and implementing the **data transformation** required for a migration.
- ✓ Zuar can **provide everything necessary** for a migration, including content review, plan of action, staff training, etc.

**WHY?  
ZUAR?**

Sink less time & money into your migration,  
while improving outcomes
